

# CLIMATE ACTION

Shreyash Srivastava  
8<sup>th</sup> C

# Climate Change:

- As we see the temperature of Earth rising day by day, it becomes a threat to us. Increase in Earth's surface temperature leads to global warming which leads to more damage to our environment like melting of polar ice caps. This threat doesn't just have an environmental impact but also an economic impact.
- It is very important for all of us to team up and take action to combat the effects of climate change.
- So, United Nations stated, “Climate Action” As a Sustainable Development Goal #13.

# Global Warming

- Basically, global warming is from the entrapment of heat by the atmosphere. The reason heat is not escaping the atmosphere is because a layer of greenhouse gas molecules is building up and acting like a thermal blanket around the earth. Gases that mainly cause this are Carbon dioxide, argon and other harmful gases.
- Global Warming is like a major contributor of the global climate change.

# Targets to move forward Activities to help reduce greenhouse gases

Some goals aim to:

- Integrating climate change measures to national policies and strategies.
- To educate and aware people about how we can protect our environment and aware about climate action.
- Implementing the commitment taken at United Nations Framework Convention on Climate Change to mobilize \$100 billion annually for developing nations on context of climate action.

# What we can do

As individuals there are lots of things, we can do to be part of climate action campaign:

- Eat food grown locally and is in season
- Throw less food away
- Drive electric cars or walk, use bicycle or use public transportation
- Use videoconferencing over travel for business (something we learnt in this Covid-19 Pandemic)
- Use less carbon-based products, such as plastic.

# Our Mission/Objective

- Our mission should be to team up together or even individually to help our climate be back to normal which is “Climate Action”. Use Sustainable Products that don't harm the Environment.
- Educate people about climate action who are not aware of it.
- And take all steps we can do at our home itself to reduce greenhouse gases and have a better climate for us and our upcoming future generation.

**WE CAN AND WE WILL DO THIS!**

Thank  
you.
