### **Topic: How do you think the world will be different after the novel coronavirus?**

What I think about how the world will be different after the novel coronavirus is that there will be many deaths in different countries where people have been tested positive for the virus. There will be people struggling in Government hospitals or Private hospitals to get the vaccination done for the virus. There will be more deaths of the people because of the bad reaction of the vaccination on those people on whom the vaccination didn't suit. Also there will be deaths of people who couldn't get vaccination done such as poor or rural people. Government will also struggle to make sure that everyone gets the vaccination done.

Right now this virus made people stop factories, this helped nature to recover as there was less waste produced on land, air and water. But after this is over the factories will reopen and the waste will start again. Also because of this virus people took time to worship god, wash their hands and stop travelling through air resulting in less air pollution but after the recovery of the virus everyone will stop taking time to worship the god, people will not wash their hands properly also many people will start travelling by air and there will be more air pollution in the surroundings. Right now people are building their human hygiene by eating Vitamin C/Citrus fruits and washing their hands with soap.

**So it results that whenever this virus will end people will become unhygienic and careless about their health.**
